***Press Release***

## **SMS launched Windows SharePoint Services 3.0**

**Customers stay connected across organisational and geographical borders.**

*Warrington, UK, Monday December 8<sup>th</sup>, 2008.* Simply Mail Solutions, the leading email hosting company, has added Windows SharePoint Services 3.0 to its existing hosting products.

In the increasingly globalised business world many business applications cannot be dealt with by inflexible standard software. Windows SharePoint however allows creation of a single workspace for teams to coordinate schedules, to organise documents and to participate in discussions across geographical and organisational boundaries. With wikis and blogs it is also possible to create forums for brainstorming ideas, building knowledge bases, or gathering information in an easy to edit format with new 40 templates provided by Microsoft. The templates provided cover most business areas including HR, IT operations, Marketing and industry specific applications.

Commented Colin Smith (MD): "SharePoint technology is an important tool for many businesses nowadays. Considering the general shift for companies to outsource their IT to hosting companies like SMS, SharePoint hosting is a developing market that we fully want to be part of. In addition, many of the arguments apply to SharePoint hosting as to email hosting including the maintenance of servers, no capital cost for the customer and servers are located in high quality and reliable environments – all to the benefit of our customers"
