

# Microsoft Exchange

## email hosting

Microsoft Exchange Server (MSE) is a major player in the corporate market for mail servers. Now we can offer it to users without the hassle and complexity of installing and supporting it for both shared and dedicated servers. This makes the features of MSE available to small groups of users and for larger organisations removes a major burden for the IT department. We even provide free copies of Microsoft Outlook to each user so that you can make maximum use of MSE features.

However our hosted MS Exchange does much more than provide superior email services. It allows collaborative working by allowing other functions in MS Outlook such as scheduling meetings, sharing access to contact details and working together on tasks. All these things can also be done using Outlook Web Access whenever you can get your hands on a pc connected to the Internet! And as new features are added by Microsoft we will make sure that you can use them without the hassle of updating and reconfiguring server software.

### SMS Exchange Features

- Log onto web access with your email address not just a number.
- Servers have their software updated as and when it is ready for production use.
- For dedicated servers you can add VPN technology for extra security.

### A More Detailed Look

- Access by POP, IMAP, SMTP and OWA
- Intelligent Message Filtering by server - you set it up
- Collaboration features including shared calendar, shared contacts, group scheduling, and shared folders
- Mobile work features such as Outlook Web Access, Outlook Mobile Access, support for Pocket PC
- Recently incorporated is Push email for mobile devices - email is sent to the device as soon as received. Requires Windows Mobile 5 devices
- For out of office working users can set up various options (e.g. forwarding email or out of office messages)
- Dynamic user list management for better management of internal email lists
- Tools available to move Lotus Notes R5 and R6 to Exchange.

Support for Windows Mobile 5 devices includes remote access and synchronisation to email, calendar and tasks and global address list without extra servers.

SMS are a BlackBerry Alliance partner and can offer Exchange email for use with BlackBerry Smartphones.

### SMS Common Features

All our email packages include:

- User management via our unique Control Panel
- Anti-spam and anti-virus filters
- Access via web browser
- 1 Gb of storage per mailbox
- Same domain can be used regardless of service
- Instant setup

**Dedicated servers** are available for larger users—servers set up to your individual requirements.
